

Add new marker-configurations

Overwriting/Updating of all existing configurations:

Unzip the downloaded file and save the included files into the M-Print PRO directory, which contains the folder “products“ (the correct path can be found in M-Print PRO under Tools → Options → Directories → Catalogue).

Confirm the prompt asking whether existing data should be overwritten by selecting “Yes” so that the former configurations are also updated.

Add single configurations:

Unzip the downloaded file and select the config files (*.mcf and *.jpg) to add.

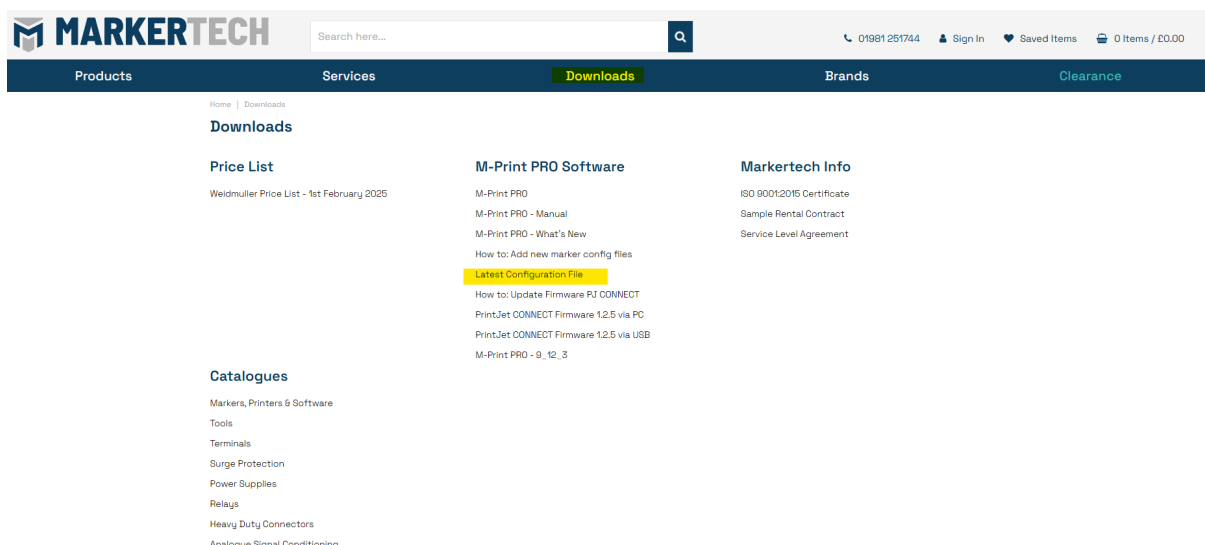

Copy these files into the folder “products“ (the correct path can be found in M-Print PRO under Tools → Options → Directories → Catalogue).

Start M-Print PRO, select the category for the new configurations, e.g. “Favourites” and click on Marker → Add.

Select the required configurations from the table (for a better overview, sort by date) and confirm by clicking “Open”.

Download actual configurations from our homepage:

<https://www.markertech.co.uk/downloads>

The screenshot shows the Markertech website's 'Downloads' page. The header includes the Markertech logo, a search bar, and navigation links for Products, Services, Downloads (highlighted), Brands, and Clearance. The main content area is divided into three columns: 'Price List' (Weidmuller Price List - 1st February 2025), 'M-Print PRO Software' (listing manuals, new news, and configuration files, with 'Latest Configuration File' highlighted), and 'Markertech Info' (listing certificates and contracts). A sidebar on the left contains a 'Catalogues' section with links to Markers, Printers & Software, Tools, Terminals, Surge Protection, Power Supplies, Relays, Heavy Duty Connectors, and Analogue Signal Conditioning.
